HP IMC Virtualization Monitor Software with E-LTU

JG547AAE

Product overview

HP Intelligent Management Center (IMC) software is a modular, comprehensive resource management platform. With its extensive device support, IMC software provides true end-to-end management for the entire network, as well as the open operation cycle. HP IMC Virtualization Monitor Software (vMon) is an IMC module that supports port running features for any switch or hub in physical and virtual environments. It allows IT departments to analyze network traffic and track security information. The biggest advantage is that vMon is vendor agnostic – it is not dependent on vendor-specific devices.
